

Technical Update

The Sonamp model 1250 and 1250 MKII are set to signal-sensing for turn on and turn off as a factory default. To change the trigger mode to 12- volts, perform the following steps:

1. Turn the power switch on the front panel "OFF"
2. Unplug the AC power cord from the back of the unit
3. Set the auto on switch to "ON"
4. Turn the auto on sensitivity control to the minimum setting (counter clock-wise)
5. Connect a voltage trigger to the control input (5v - 24v) without a voltage present.
6. Reconnect the AC power cord
7. Turn the power switch on the front panel "ON".
8. The amp will go active, wait for the amp to turn off (approximately 10 minutes)

Once the amp turns off, it will now respond to a voltage trigger.
