CINEMA LIVING
Sonance Cinema Living delivers the highest quality acoustic performance with minimal visual intrusion.
Sonance invented the in-wall and in-ceiling speaker thirty years ago and has mastered the art of delivering high fidelity sound with discreet recessed products. Your home is a reflection of your personality and with Sonance you can enjoy the very best audio quality without compromising your interior design.
Sonance Cinema Living delivers the highest quality acoustic performance with minimal visual intrusion.

Sonance invented the in-wall and in-ceiling speaker thirty years ago and has mastered the art of delivering high fidelity sound with discreet recessed products. Your home is a reflection of your personality and with Sonance you can enjoy the very best audio quality without compromising your interior design.
BEST SOUND IN THE ROOM YOU USE MOST

The living room is the social and entertainment hub of a home. It can be the focal point where you watch sports, enjoy movies or play video games, or simply provide background music as you relax, prepare meals, or dine with friends.

It makes sense to put the best sound in the room you spend the most time in, day in, day out. Get the most out of your living space, and be the envy of your friends!
GAME ON

Video games have come a long way in the last few years, with high definition images and digital surround sound as good as any movie. Gaming has gone beyond something for children and has entered into a whole new realm of entertainment for the entire family.

Sonance Cinema Living speaker technology will unlock the full potential of both the game and the console, immersing you in the moment.

Sonance Cinema Living speakers are constructed from the highest-quality materials including carbon fiber and ultrawideband tweeters in a polymer cone, silk-dome full-range tweeters, die-cast aluminum baskets, and 307-mil medium-density fiberboard enclosures.
HOLLYWOOD AT HOME

If you're building a dedicated home theater, then look no further than Sonance Cinema Living. With solutions including 10" and 12" subwoofers, combined with front and surround speakers featuring dual or quad 2.5" woofers, 4" midrange and 1" tweeters, you will have the power to impress.

And because they can be installed in the wall, you achieve the sound of Hollywood without compromising the look of your new home. Either use the supplied micro-trim grille, or hard-pan the set behind your acoustic treatments.

Sonance in-wall subwoofer cabinets are constructed from a combination of 0.75" and 1/4" MDF with extruded aluminum backing providing rigid perimeter and damping. The futuristic design integrates into a standard 16" on-center stud bay, providing the subwoofer bass response with minimal disturbance or adding noise.
DECADENCE YOU DESERVE

Your bedroom or retreat is your sanctuary, so you deserve a quality audio experience when you are watching movies or relaxing listening to music.

Sonance Cinema Living is the perfect solution for bedrooms with speakers to suit nearly any installation and budget.
Coaxial midrange / tweeter drivers
The Cinema Series' ICR and SURF speakers feature a unique coaxial midrange / high frequency driver. The midrange driver features a low profile cone that does not compromise the performance of the tweeter mounted in its center. This arrangement results in extremely consistent off-axis frequency response that provides the same reference-quality sound to every listener, not just those sitting in the "sweet spot".

Dual and quad woofers
The Cinema Series speakers feature two woofers in the ICR1 and SURF1 and four woofers in the ICR2 and SURF2. A typical installation, using single woofer speakers, reflections off the floor and ceiling can cause dips in frequency response up to 60Hz. With a dual woofer speaker, these dips are minimized since the two woofers will be a greater distance from the reflective surfaces.

Laminated Cones
The midrange and woofer drivers both have cones featuring a laminate of carbon fiber and Rohacell®. These two materials combine to make a cone that is very light, strong, and extremely stiff. Additionally, the density of the cone material prevents sound produced by the bodies of the drivers from being transmitted through the cone material, so resonance problems with less-dense materials.

Integrated ¾" medium density fiberboard (MDF) enclosure
All of the Cinema Series models feature an integrated enclosure made from ¾" MDF. The enclosure's density and tightly wound sound isolation from the drivers rear, minimizing sound radiation into adjacent spaces. In addition, the MDF is non-resonant, which minimizes the sonic coloration that can ruin soundtracks of clarity and impact.

Aluminum reinforced subwoofer enclosure
The Cinema Series' ICS1, 1CS2, and 10CS2 models feature a revolutionary new design. Oliver's special laminate of standard and ultra-thin aluminum was made to reinforce the enclosure to maintain the highest levels of rigidity. The supports made of extruded aluminum can battle to maintain volumetric efficiency of the enclosure.

Inverted voice coil technology
The Cinema Series ICS1, 1CS2, 10CS2 Sub 10CS2, and 12CS2 as well as the subwoofers feature an inverted voice coil driver. The main advantage of inverting the voice coil is to create a much larger surface area which to direct the current, increasing the size of the coil both-gain in efficiency and in linearity during strong bass passages.

Sonance has developed a range of Cinema Living speakers for any installation, including walls, ceilings, and even on shelves or in entertainment furniture.

Sonance Cinema Living speakers have been specifically designed so that you can mix and match in any configuration and still achieve uncompromising performance.

**IN-WALL SUBWOOFER**

Suspended in-wall Subwoofers provide deep frequency response while being installed completely invisible in walls. Engineered to perform as well as any cabinet subwoofer at fractions any sound transfer through the walls.

**POWERED SUBWOOFER**

Sensorium Powered Subwoofers deliver powerful, low-distortion bass to home environments. Enclosed aluminum woofer cones combine with finely balanced sealed enclosures to deliver room-shaking bass, while keeping cabinet clutter to a minimum. The front-ported controls and remote amplifiers allow these subwoofers to be hidden away from audio tech or other furnishings.
