INVISIBLE SERIES SPEAKER DRYWALL INSTALLATION

1. Select the appropriate shim for the application. Use cardboard shims for fine tuning.

2. Secure speaker with drywall screws. DO NOT USE NAILS. TEST THE SPEAKER FOR 60 SECONDS WITH A TEST TONE OR AMPLIFIED AUDIO SOURCE BEFORE COVERING WITH COMPOUND! This is the last point any wiring corrections can be made.

3. If needed, fill gap between speaker and drywall with 5 minute setting type joint compound (hot mud). Apply mesh fiberglass tape over seam to add strength to the joint. Do not tape over the raised portion of the speaker (diaphragm).

4. Apply topping compound over speaker (1/8" [3mm] max. compound buildup), feather edges to achieve a flat finish. Continue to finish wall as required. See website for additional finishing options.

5. After final coat is applied and has dried, use a manual pole sander or block sander on entire wall (do not use a power sander). Wall surface should show no signs of a speaker. If any defect is found, coat affected area and sand to smooth finish.

NOTE: To install SONANCE Invisible Series Speakers for any finish other than drywall, please visit our website: WWW.SONANCE.COM/PRODUCTS/INVISIBLE
